

Update to CyberShift Dial Up Feature

In the September 1 Edition of the PW, DFO published a reminder that the function would be implemented on September 27, 2009. There was an omission in the article that there is one other choice that the schools based administrative staff have in keeping their time and that is the Web Clock feature in CyberShift. The administrative staff, which include, but are not limited to, parent coordinators, community associates community coordinators, community assistants, school business managers, SAPIS, computer techs, clerical titles, annual and hourly, would have to log into the system to avail themselves of this feature. This feature is not new, we just wanted to remind staff of it.
