The Hammerhead shark

The whale shark and the Hammerhead shark have many similarities. The whale and Hammerhead shark both live in the ocean. They both are very unique. They both get very curious. And lastly they both eat living things under water. Here are some facts about the Hammerhead shark.

PAGE 04/03

The Hammerhead shark
has eyes and nostrils at the
tip of the "Hammer." It can see
in a full circle. It eats squid,
fish, and other shark. It grows
up to 3 or 4 meters long. It
hunts at night by itself.
This type of shark gets
frightened by human's bubbles
when they jump into the water

I chose the Hammer-
head shark to study
because they are fascinating.
Their eyes see in a full circle.

ALSO, their body is ~~one~~ with
a tint of green. Even more
interesting, their body is shaped
as a hammer. But most of all, it
eats stingray and uses its
"Hammer" as a weapon!

Whale shark

The shark that I will like to study is a whale shark. I'm curious about their teeth! I want to study this shark and not the other one because they have a lot of interesting facts to study on. That's why I want to study on the whale shark.

I think that the whale shark is cool because they have alot of spots. They have many tiny teeth. They look and is as big as a whale shark. Also in the night the shark all it does is eat plankton. I am also intrested in them because they grow 19 meaters long.

My conclusion is that the whale shark is important because it is the largest fish in the world.
