TCRWP Informational Writing Performance Assessment

1. Introduction

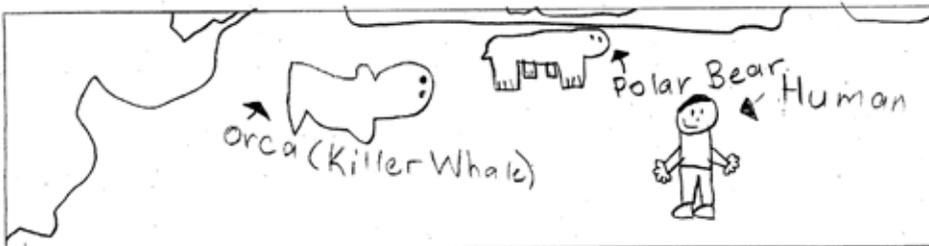

Squeak! Welcome to a seals life! You'll find why Seals eyes are so big, you'll find why Seals are mammals, and you'll find how Seals are also underwater animals! That's just a taste of what your getting!

1. Introduction

TCRWP Informational Writing Performance Assessment

2. Baby Seals

3. Preatators

Preatators are kinda like enemies of Seals. Plus, Seals are on the list of endangered animals because of global warming! We need to stop it now! Well, the preatators are Polar Bears, killer whales and humans. That isn't so much right? Well that doesn't matter being endangered matters so stop global warming and save Seals and other arctic animals!

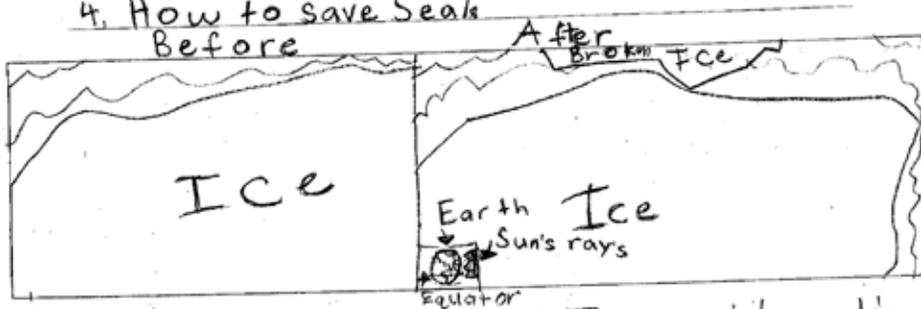

3.

TCRWP Informational Writing Performance Assessment

3. Predators

A graphic organizer for an informational writing assessment. It consists of a horizontal line with four tick marks, a vertical line on the left, and a vertical line on the right. Four boxes are stacked vertically on the right side, connected to the horizontal line by diagonal lines.

4. How to save Seals

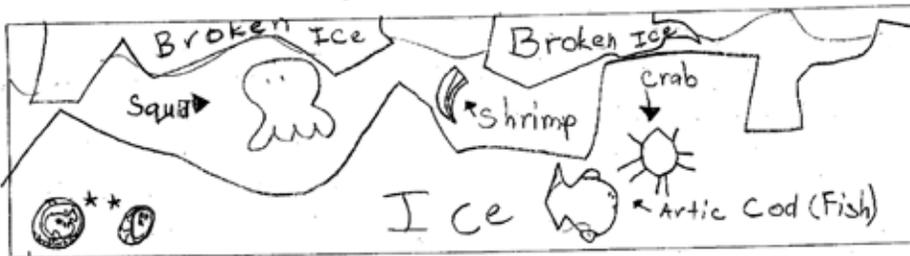

Saving animals are good. Especially artic animals! Global warming is bad. It happens when it's summer on the southern part of the Earth ^(Antarctic) and the Sun's rays touch, also days are longer! So you'll be playing more and having fun! 14 hours of sun (In the spring and summer only.) And 10 hours of night! So save Seals and stop global warming!

4.

TCRWP Informational Writing Performance Assessment

5. Food/Living

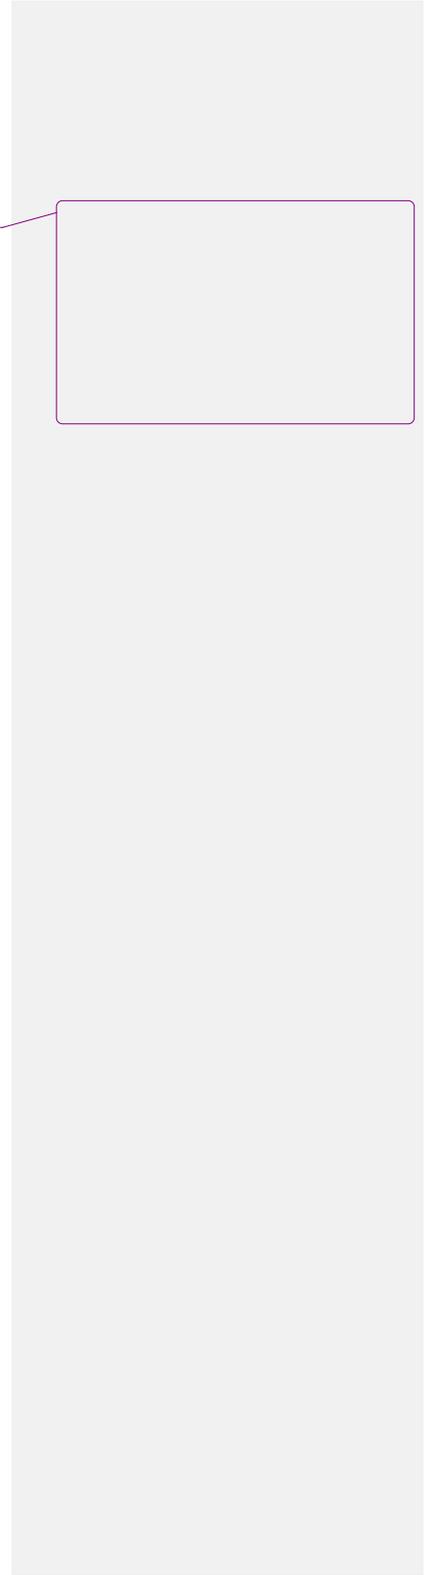

Seals don't have much to eat, not so much for living either. Like: Shrimp, Crab, Artic Cod and Squid. See what I mean? They pretty much don't do anything for living but getting food. Seals live in Antarctica or the North Pole. * With their fur it keeps the seals body warm. So then the Seal could live. So it's food for everyone!

5.

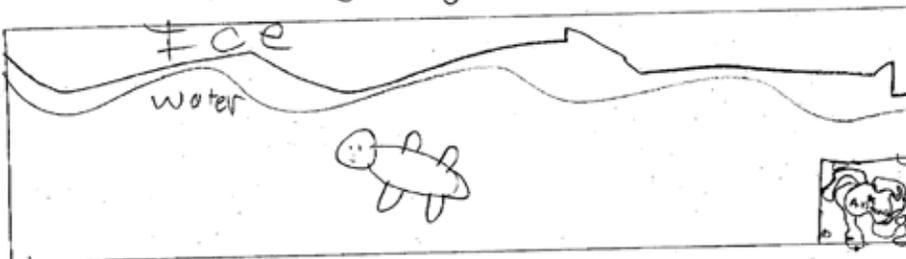

5. Food/Living

TCRWP Informational Writing Performance Assessment

Seals don't have much to eat, not so much for living either. Like: Shrimp, Crab, Arctic Cod and Squid. See what I mean? They pretty much don't do anything for living but getting food. Seals live in Antarctica or the North Pole. With their fur it keeps the seal's body warm. So then the seal could live. So it's food for everyone!

Concluding Page

Seals don't do much stuff right? Well then your wrong! Seals actually swim very far in the summer to find food. Sometimes it takes them 6 months to 3 years to find food because of global warming! And for the last time I will say Save Seals And Other Arctic Animals!

SSAOAA

informative and lively at the same time.

TCRWP Informational Writing Performance Assessment

t

Ringed Seal

The Seal's enemies are: Polar Bears, Killer whales and humans. A thick layer of blubber keeps him warm. The Seal can stay underwater for almost an hour without even taking breath! His big round eyes can help him see in the dark. The size at birth is: 8-11 pounds and 2 feet. The size of an adult is: 130-155 pounds and 5 feet long. His favorite foods are: Shrimp, crab, arctic cod and squid.

|

TCRWP Informational Writing Performance Assessment

1. This is mostly about how Hyenas live, and what they do for living. For example, they eat meat.

|

2. This is mostly about how Elephants live and how they live. For example, the leader of a herd is a female.

|

TCRWP Informational Writing Performance Assessment

3. The author wants us to think how do animals live, what do they do for living? Or how they survive?

An empty rectangular box with a purple border, connected to the handwritten text above by a purple line.

4. What's the same is the two books are about animals. And the difference is they're different animals and they do different stuff.

An empty rectangular box with a purple border, connected to the handwritten text above by a purple line.

TCRWP Informational Writing Performance Assessment

Seals

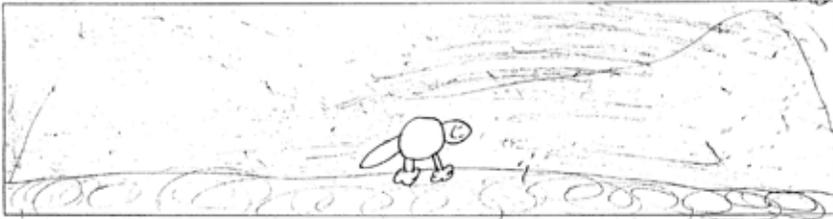

Seals are an animal that live in
freezing cold water but Seals can
survive the cold water and are because
there skin helps them in the cold
are. Seals are a polar bears favorite snack
but it is still hard to eat because it's
skin.

Seals

Seals are an animal that live in freezing cold water, but seals can survive the cold water and air because their skin helps them in the cold air. Seals are a polar bears favorite snack but it is still hard to eat because it's skin.

TCRWP Informational Writing Performance Assessment

Polar bears

Polar bears are a type of animal that live in the Arctic. Polar bears are white. A polar bear's favorite snack is a seal but it is really hard because the seal's skin and a polar bear's teeth are not really sharp.

Polar Bears

Polar bears are a type of animal that live in the Arctic. Polar bears are white. A polar bear's favorite snack is a seal but it is really hard because the seal's skin and a polar bear's teeth are not really sharp.

TCRWP Informational Writing Performance Assessment

Walrus

walrusis hav super long teth and very sharp teth walrusis love to eat shrimp and crab lobster fish. Walrusis luke a litul bit like a sel exsept Walrusis hav super long teth and sharp and sels oly hav teth not sharp teth not little teth gost teth.

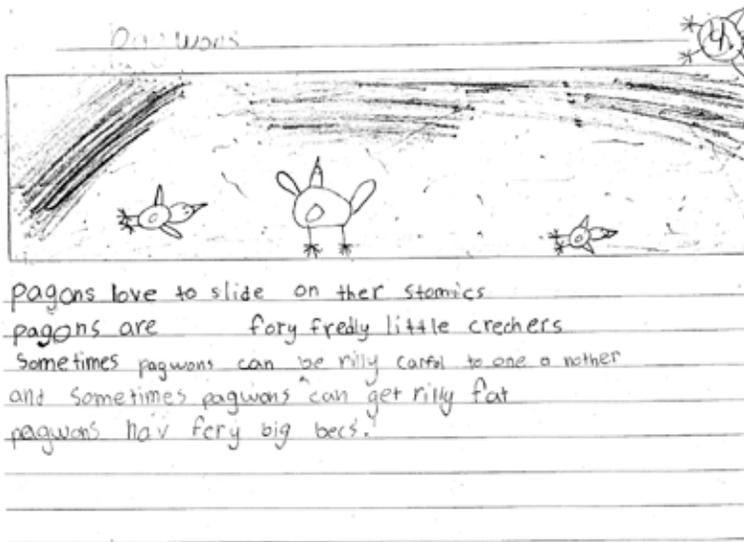

Walrus

Walruses have super long teeth and very sharp teeth. Walruses love to eat shrimp and crab lobster fish. Walruses look a little bit like a seal except walruses have super long teeth and sharp and seals only have teeth not sharp teeth not little teeth just teeth.

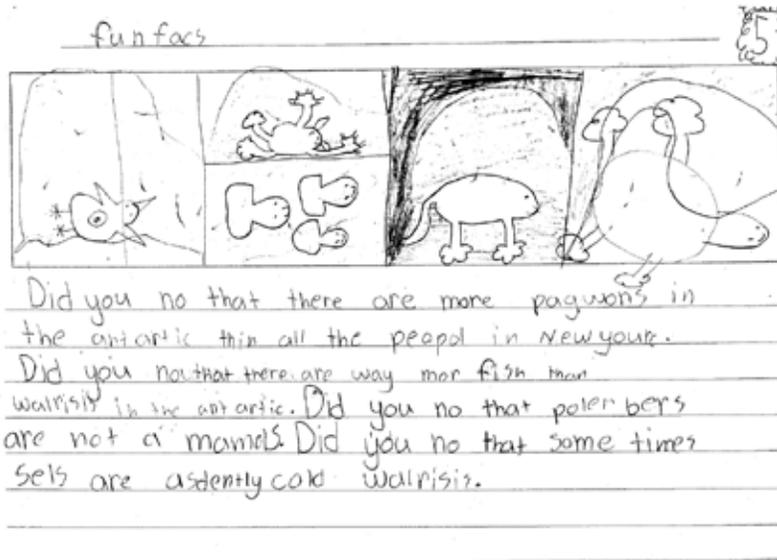

TCRWP Informational Writing Performance Assessment

Penguins

Penguins love to slide on their stomachs. Penguins are furry friendly little creatures. Sometimes penguins can be really careful to one another and sometimes penguins can get really fat. Penguins have very big beaks.

TCRWP Informational Writing Performance Assessment

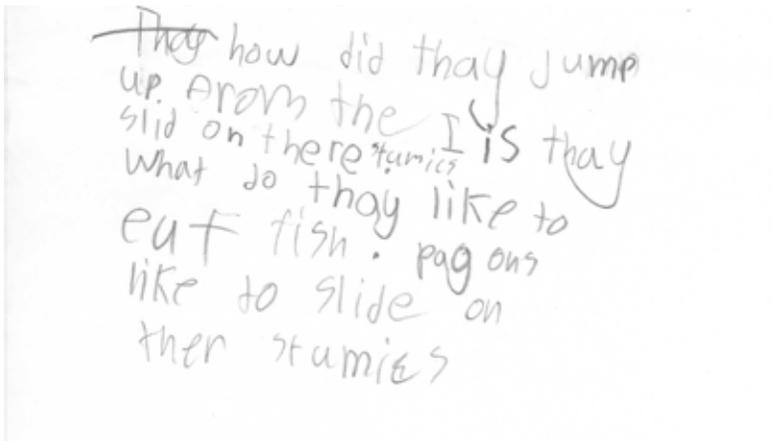

Fun Facts

Did you know that there are more penguins in the Antarctic than all the people in New York. Did you know that there are way more fish than walrus in the Antarctic. Did you know that polar bears are not a mammals. Did you know that sometimes seals are accidentally called walrus.

TCRWP Informational Writing Performance Assessment

2nd Grade Reading Response Sample

How did they jump up from the ice? They slid on their tumies. What do they like to eat? Fish. Penguins like to slide on their tumies.

TCRWP Informational Writing Performance Assessment

It is about a seal and where it
lives. In the ocean. What it is/
a seal and how many pounds it
weighs what it eats crabs shrimp clams
fish. How long it is how big
they are what can they do
what can they learn what like
to eat seals. Seals are animals
that live in the ocean. And
seals have a family sometimes
a little one sometimes a big one
polar bears like to eat seals but it is
very hard for them to eat seals
because they have skin. Sometimes
people think that a seal is a walrus or a
walrus is a seal.

We can only live to like 100 or 80 or 103, but not elephants they can live like triple that. Way longer than us. Elephants love to soak in the mud or water.

TCRWP Informational Writing Performance Assessment

3. The others want us to think that elfins and high dogs are cool to study so we might want us to study so we can be welfy and stop hand hav a good egacamon and help lern mor thing? about hanner how it worcs what conta anrol? are there in the erth what things are there to esion.

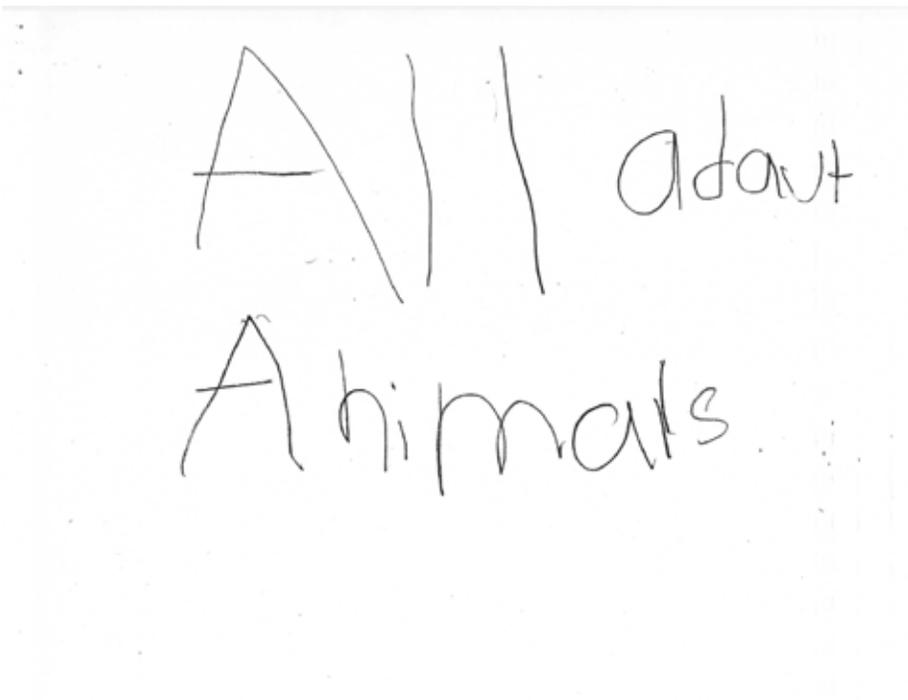

TCRWP Informational Writing Performance Assessment

The authors want us to think that elephants and hyena dogs are cool to study so we might want us to study so we can be wealthy and better and have a good education and help learn more things about humans, how it works, what kind of animals are there in the earth, what things are there to explore.

4. The game is that there are both talking about animals and what animals do to survive and what they like to do and how they do it what they do for living and playing how they talk and communicate to each other what they learn from each other. wolves can communicate to each other by sneezing growling or barking.
