

Date: January 25, 2010

Topic: Proposed Phase-out and Closure of Metropolitan Corporate Academy

Date of Panel Vote: January 26, 2010

---

### **Summary of Proposal**

The original educational impact statement regarding this proposal was published on the Department of Education website on December 10, 2009. It was amended and re-published on the website on January 8, 2010.

This is a proposal to phase-out and close Metropolitan Corporate Academy (15K530, “Metropolitan Academy”), an existing school serving students in grades 9-12 in Community School District 15. Metropolitan Academy currently is located at 362 Schermerhorn Street in Brooklyn. Beginning in 2010-2011, Metropolitan Academy will begin phasing out one grade per year until the school closes in June 2013.

### **Summary of Comments Received at the Joint Public Hearing**

A joint public hearing regarding this proposal was held at school building K530 on January 14, 2010. 82 individuals attended the hearing. 31 spoke, all opposed to the proposal. Speakers opposed the proposal for the following reasons: Metropolitan Academy’s lack of facilities, the unfairness of applying citywide metrics to Metropolitan Academy, Metropolitan Academy’s small, caring learning environment, Metropolitan Academy’s service to the community, the extra time beyond four years students need to graduate, the uncertainty of new school performance, Metropolitan Academy’s care of students’ emotional needs, DOE’s violation of the contract for excellence, the DOE is not proposing to phase-out other schools with low graduation rates, the recent improved safety of Metropolitan Academy, and the possibility that the proposal will shuffle kids around.

### **Summary of Issues Raised in Written and Oral Comments and Significant Alternatives Suggested**

Three written comments regarding this proposal have been received. Two comments were purportedly from parents; one is from a current student. All three were in opposition to the proposal. The two parent complaints concerned the earlier intention to hold the Panel for

Education Policy meeting at the Michael J. Petrides School in Staten Island. These comments are no longer valid because the meeting has been relocated to Brooklyn Technical High School. The student contends that Metropolitan Academy did not have sufficient resources and that the decline in graduation rate was not as steep when compared to other low performing schools in the city. Some speakers proposed applying new school funding to current school, rather than phasing-it out.

In addition to the above comments, some individuals and one organization, Class Size Matters (“CSM”), submitted written comments objecting to all of the phase-outs proposed by the DOE. Although the comments did not address any one phase-out proposal in particular, but instead addressed all proposals generally, the DOE has incorporated these comments into the public comment analysis for each phase-out proposal, including Metropolitan. In opposing the DOE’s proposal to phase-out and eventually close these schools, these commenters cited the following reasons: (1) the Educational Impact Statements for the proposals cite incomplete or inaccurate graduation rates and do not state the schools’ five-year graduation rates as used by the New York State Education Department; (2) the DOE did not use a rational formula and failed to follow its own accountability standards in proposing these phase-outs; (3) the schools the DOE has proposed for phase-out have significantly high numbers of minority and high-risk students, including special education students, incoming ninth-grade students with low scores upon admission, and homeless students, who will not be accepted or accommodated at the new small schools that replace the phasing out schools; (4) the Educational Impact Statements do not address where students at the phasing out school who are behind in credits will attend in the future; (5) the Educational Impact Statements fail to analyze the impact of the phase-outs on overcrowding of other schools and use figures from the DOE’s Blue Book, which does not use a formula that is aligned with state-mandated class size goals; (6) closing large, zoned high schools will force many students to travel further from their homes; (7) large high schools provide more choices in electives for students and can address a broader range of students; (8) the Educational Impact Statements do not address the financial impact of the placements of teachers from the phasing-out schools into the Absent Teacher Reserve (ATR) or the expense of funding the new schools; (9) the phasing out schools are being punished for setting high academic and safety standards; (10) the phase-outs will impair recruitment of teachers into schools serving high-needs students; and (11) there is no evidence that the DOE has made an attempt to improve conditions at the schools the DOE has proposed to phase-out.

Finally, CSM calls for a moratorium on school closings until the City’s Independent Budget Office can prepare a report on the effects such closings. As an alternative, CSM suggests that rather than phase-out these schools, the DOE should: (1) implement smaller class sizes at the schools; (2) restore the superintendent role and cooperation between schools; (3) provide more resources and expert help for the schools; (4) develop better curricula for at-risk students; (5) provide more support to large, comprehensive high schools; (6) launch an independent investigation of test score inflation, credit recovery and cheating, and reform the accountability system so as to not encourage these practices; and (7) implement new approaches to discipline.

## **Analysis of Issues Raised, Significant Alternatives Proposed and Changes Made to the Proposal**

Demand for seats at Metropolitan Academy is low even among the 20 schools the DOE has proposed for closure. Only 18 out of 80,000 eighth-grade students selected this school as their first choice on their high school applications last year. There are many better options in Brooklyn, and by closing this school, students who typically would have been placed at Metropolitan Academy will be able to attend schools better equipped to support their academic needs. Closing Metropolitan Academy will also allow the Department to continue expanding the diversity of high-quality school options available to students and their families.

Metropolitan Academy was listed among the NYPD's Top 10 most violent schools in 2004. While safety has improved considerably, only 51 percent of Metropolitan Academy students indicated that they felt safe at school on the 2009 Learning Environment Survey.

Some commenters have suggested that the DOE has not used a rational formula and has not followed its accountability criteria in deciding which schools should be phased out. Under the DOE's accountability framework, schools that receive an overall grade of D or F on the Progress Report are subject to school improvement measures. If no significant progress is made over time, a leadership change (subject to contractual obligations), restructuring, or closure is possible. The same is true for schools receiving a C for three years in a row and for any school that the Chancellor has determined lacks the necessary capacity to improve student performance, regardless of the school's Progress Report grades and Quality Review scores.

Metropolitan Academy earned a D grade on its 2008-09 Progress Report and a C grade the previous two years. Of the five lowest Progress Report scores in Brooklyn, Metropolitan Academy was the only school deemed Underdeveloped or Underdeveloped with Proficient Features on its two most recent Quality Reviews. Metropolitan Academy was designated "Underdeveloped" on its 2009 Quality Review and "Underdeveloped with Proficient Features" in 2008, suggesting that the school is ill-positioned to reverse the pattern of declining student achievement that has taken root at the school. Since the school opened it has failed its students, and it shows signs only of becoming worse. In 2008-09, the four-year graduation rate at Metropolitan Academy declined to 47 percent even as graduation rates improved citywide. Similarly, credit accumulation rates at the school also declined as compared with the increase citywide. One commenter cites the State Education Department's recent adoption of five-year graduation rates as a reason for opposition to the phase-out proposals. However, the policy cited by the commenter was only recently adopted by the Regents and the state continues to use the four-year graduation rate in their accountability standards as well.

It is also important to understand that the Department of Education weighs numerous factors when evaluating schools as candidates for closure. Although Progress Report grades and Quality Review scores contribute significantly to the decision-making process, they are not the only considerations. The Department of Education takes into account many other sources of information as well, including school performance trends, enrollment data, demand data, and evaluations by superintendents and school support staff who work closely with the school and can evaluate its capacity to make significant improvements within a short time span.

The Quality Review evaluates how well schools are organized to improve student learning. The Quality Review measures educator and administrator actions, which are “inputs.” It does not measure results, or “outputs,” and though it reflects some factors in school success, those are but one set of factors. If administrator actions improve while student progress does not, we still must try to change the outcome. Schools are rated on a four-point scale, with “Well Developed” representing the top category of performance.

But school turnaround is difficult, takes time, and does not always succeed. A score of “Well Developed” might give us confidence that the school has the capacity to rapidly make significant improvements, while a “Proficient” school may only be capable of making incremental gains insufficient to quickly reverse a longstanding history of failure.

Proficient schools possess strengths and weaknesses. In evaluating the Quality Review reports from schools considered for closure, we looked closely at the reviewer’s assessment of those strengths and weaknesses to see how they might impact the school’s capacity to achieve a dramatic turnaround. For example, at many of the schools proposed for closure, evaluators found that instruction lacked rigor or was not sufficiently differentiated to meet individual student needs—both very serious concerns.

Many of the schools we proposed for closure received “Proficient” ratings on their Quality Reviews, and that is good news for current students who will remain enrolled in the school as it phases out. We expect phase-out schools to continue supporting their students and, in fact, outcomes at phase-out schools have historically improved with each successive year. That said, the Department’s comprehensive review of the 19 schools proposed for closure found that none of those schools was equipped to make the dramatic progress needed to quickly transform into truly successful schools where all students can thrive.

Some commenters have asserted that the DOE has targeted schools with high numbers of minority students and at-risk students, including special education students, incoming ninth graders with low test scores, and homeless students. In support of this claim, commenters state that the schools subject to phase-out serve a significantly higher number of at-risk students than schools with similarly low grades that are not slated for closure. They also claim that these students will be displaced as a result of the school phase-outs because the new small replacement schools will not accept or accommodate such students. New schools that have been opened by the DOE serve all students.

The new small schools that have been created over the last six years do accept English Language Learners and Special Education students and are serving them at a higher rate than schools citywide, with better outcomes. On average the new schools have a graduation rate of 75% and are serving some of the hardest to serve students. Here are some facts:

- The vast majority of new schools have unscreened admissions policies.
- During the 2008-2009 school year, ninth-grade enrollment at new schools included 14.2 percent special education students and 13.6 percent English language learners, compared to 12.8 percent special education students and 10.3 percent English language learners citywide.
- When looking across a school’s entire population, they also serve more special education students and ELL students than the citywide average. In 2008-2009, new schools served an

average of 12.3 percent special education students and 12.6 percent English language learners compared with 11.6 percent and 10.8 percent, respectively, citywide.

- Looking at Collaborative team teaching and self-contained classes—considered the highest-need special education students—new schools continue to serve a larger population than schools citywide with 8.1 percent of their students requiring those services compared to 7.4 percent citywide in 2008-2009.
- Similarly, new small schools serve a higher proportion of low-income students, black and Hispanic students, and students performing below grade-level expectations upon ninth-grade enrollment when compared against citywide averages.

Current students at the schools proposed for phase-out who are behind in credits, including current Metropolitan students, will not be displaced as a result of the phase-out proposals. The DOE is committed to supporting schools as they phase-out. The DOE will assist phase-out schools in developing individual plans for each student to ensure that they continue to accumulate credits and will be able to graduate before or at the point the school is slated for complete phase-out. Any students who are unable to accumulate the requisite number of credits within the three-year timeline will be placed in other schools or programs that meet their needs and where they will continue to work towards earning a diploma.

The DOE does not anticipate that the phase-out of schools will result in overcrowding at other schools throughout the city. With the phase-out and eventual closure of these schools, including Metropolitan, the DOE has also proposed the phase-in of several new small schools. The building in which Metropolitan is housed will not be closed and citywide we will be replacing each seat that is lost. For next year there will be sufficient seats. Through a combination of new facilities, the adjustment of enrollment projections and the opening of new schools, we will serve all students who otherwise would have attended a school proposed for closure. The centralized High School Admissions Process allows us to do two things: (1) ensure that students have access to high quality options and (2) ensure that we plan for all schools appropriately.

It is important to be clear that the DOE values choice. Many of the overcrowded schools are zoned schools that offer additional programs for students outside of the zone. We constantly struggle to balance demand for zoned and choice programs in a school. Currently students are not choosing to attend these schools and they are not at full capacity. By phasing out these underperforming and low demand schools and putting in new options, we will draw students back to the campus and ultimately reduce overcrowding in other areas.

Commenters have further stated that closing large, zoned high schools will force many students to travel further from their homes. Given the over 400 high school options available to students, they will only have to travel further from their homes if there is a high school option that they wish to attend. Additionally, some commenters have stated that large high schools provide more choices in electives for students and can address a broader range of students than the small schools that will replace them. Small schools currently offer AP and College Now Courses in addition to other electives depending on the particular school and student demand. Schools on a campus can also collaborate to offer electives to students across the various schools on the campus.

Some commenters also state that schools are being punished for setting high academic and safety standards. The DOE is not using phase-out proposals to punish schools. The schools proposed for phase-out have not exhibited evidence of helping students to achieve high standards. In fact, the schools proposed for phase-out have a long history of underperformance.

In opposing all of the DOE's phase-out proposals, one commenter argues that no school should be phased out and closed due to the potentially impaired recruitment of teachers into schools serving high needs students, the costs associated with starting new replacement schools, and the expense of placing teachers in the absent teacher reserve pool. There is, however, no evidence that school closures cause teachers to avoid working at schools that serve high needs students. In fact, over the last seven years, the DOE has raised teacher preparation to a point where 100 percent of teachers are certified, as compared to a low of 83 percent before, with the gap existing in high-poverty schools. Second, while there are costs associated with the opening of new schools and with teachers put into excess, the greater cost is that of the thousands of students who have passed through the schools proposed for closure without graduating or developing proficiency. Cost can only be considered in the context of what is earned in return. In these cases, too few students have earned the education we owe them, and the costs are born by not just the DOE, but those children, their families, and society at-large.

Finally, members of the public commenting on this proposal have asserted that there is no evidence that the DOE attempted to improve the conditions at any of the schools it has proposed to close and suggests steps the DOE should take to improve these schools. Metropolitan has worked closely with a School Support Organization and network team selected by the principal and School Leadership Team. Professional development was increased to focus on differentiation of instruction, curriculum mapping, grade team meetings, interdisciplinary strategies, flexible grouping, and mentoring by lead teachers, assistant principals and support organization staff. In addition the school has had partnership with NYC City College of Technology partnership, which includes support for development of College Now Program, Teacher Leadership Quality Partnership (integrating technology in mathematics instruction) and Carpe Diem program for use of T-Inspire in small learning communities; NYC Public Library and City College (CUNY) on research based learning; and Goldman Sachs.

Because there is little evidence to suggest that continued school improvement measures will result in improved outcomes for students, the DOE has chosen not to accept the alternatives proposed. The proposal will be presented to the Panel for Educational Policy as currently posted.
